PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 6+ years of experience shipping products that matter across insurtech, fintech, and enterprise SaaS. I build and architect at scale, contribute to teams that move fast, and help define how engineering gets done. At Afficiency, our team scaled a platform to 30,000+ agents, 6-8 carriers, and \$5-8M in annual premium volume, while collectively redefining how we ship software using AI-augmented development with Claude Code. I thrive at the intersection of technical depth and product ownership. I'm looking to take on harder problems at greater scale, where collaborative engineering, ownership, and real product impact matter.

PROFESSIONAL EXPERIENCE

Afficiency Inc.

Sep 2023 – Present

Senior Full Stack Engineer | New York, NY

- Co-defined a company-wide AI-augmented engineering SOP using Claude Code: standardized specs, BRDs, and custom skills as AI input artifacts, drove full team adoption, and cut feature delivery from days to same-day (small) and weeks to about a week (large), with Playwright test coverage included end to end
- Collaborated on end-to-end delivery of 6+ major platform initiatives across a \$5-8M annual premium platform processing 35+ policies per week, including a rule-based fraud detection system (LexisNexis, identity and velocity checks), an in-application e-signature and client consent platform, a self-serve agent feedback journey, an AI-powered UI audit pipeline, and AffiHub, an in-house customer support ticketing system (HubSpot-equivalent) with ticket management and workflow automation
- Led full codebase architecture overhaul: consolidated a mix of monolithic services and fragmented repos into a unified mono-repo, standardizing shared libraries and decoupling UI and backend concerns across 6-8 carrier integrations
- Built Monitorly, an in-house observability platform (LogRocket-equivalent) covering session replay, error tracking, and performance monitoring. Eliminated the LogRocket subscription and reduced tooling costs by 40% for engineering and customer support teams
- Architected the core platform serving 30,000+ agents across 6-8 carriers: built a schema-driven React UI framework with configurable rule engine (Zustand) enabling zero-code carrier onboarding, and engineered Flask APIs with Redis caching and query optimization, cutting response times by 60% for real-time policy quoting
- Drove engineering operations and team growth: automated CI/CD pipelines (GitLab, Docker), conducted 2,000+ code reviews improving release consistency by 35%, and mentored engineers on AI-augmented development practices as the team scaled across new carriers and product lines

Systems Engineering Research Center (SERC)

Jul 2022 – Jun 2023

Full Stack Developer (Graduate Role) | Hoboken, NJ

- Designed and launched Helix, a multi-survey behavioral research platform (React.js, Node.js/Express, MySQL, AWS) supporting 20,000+ active researchers. Owned the product end to end from architecture through deployment, including a full frontend migration from a PHP Laravel monolith to a modern React SPA with code-splitting and lazy loading, improving performance by 40%
- Architected a secure RESTful API backend with RBAC, JWT authentication, and SQL injection prevention for sensitive research data, and built a reusable React component library using hooks and compound patterns, cutting code duplication by 50% and accelerating feature velocity by 25%
- Containerized with Docker and deployed to AWS EC2 via GitHub Actions CI/CD, achieving 15-minute deployments and 99.9% uptime SLA across a platform serving active academic researchers

LTI (Larsen & Toubro Infotech)

Jan 2019 – Jul 2021

Software Engineer, Cloud & Infrastructure Services | Navi Mumbai, India

- Built and maintained a MERN stack enterprise production management application on AWS serving 50,000+ users globally. Delivered real-time data sync, analytics dashboards, and 200+ RESTful API endpoints with pagination, filtering, and enterprise-scale error handling
 - Achieved 10x API performance improvement by implementing Redis caching, optimizing MongoDB aggregation pipelines and indexing strategies, cutting average response times from 3s to 300ms at enterprise traffic scale
 - Refactored monolithic Node.js backend into a domain-driven microservices architecture enabling independent deployments and horizontal scaling. Integrated New Relic and Nagios for APM and infrastructure observability, and partnered with QA to achieve 80% automated test coverage
-

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML/CSS

Frontend: React.js, Next.js, Vue.js, React Native, Redux, Zustand, React Query, Expo, Chakra UI

Backend: Node.js, Express, Flask, FastAPI, GraphQL, REST APIs, Microservices, Socket.io

AI / LLMs: Claude Code, Claude APIs (Anthropic), LangChain, Hugging Face, RAG pipelines, FAISS, Prompt Engineering

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLAlchemy, SQL Server, NoSQL

Cloud & DevOps: AWS (EC2, S3, CloudFront, Cognito, Lambda), GCP, Azure, Vercel, Firebase, Docker, NGINX, CI/CD

Tools & Practices: Git, GitLab, GitHub Actions, Postman, Playwright, New Relic, JIRA, Agile/Scrum, UX/UI Design, Figma

NOTABLE WORK

Monitorly: *React.js, Flask, AWS, WebSockets*

- In-house session replay and observability platform (LogRocket-equivalent) built to replace a paid SaaS subscription. Covers session recording, error tracking, and performance monitoring, saving the company 40% in tooling costs while serving both engineering and customer support teams in production

AffiHub: *React.js, Node.js, Flask, PostgreSQL, AWS*

- In-house customer support ticketing platform (HubSpot-equivalent) built for internal operations. Features ticket creation and management, workflow automation, agent assignment, and status tracking, replacing the need for an external CRM subscription

Side Projects

JumpToCode (React Developer Chrome Extension): *React Fiber, Node.js, Express, VS Code CLI*

- Built a Chrome DevTools extension that traverses the React Fiber tree to map live UI components to their exact source file and line, enabling one-click navigation to code in VS Code via a secure localhost Express bridge, with an interactive overlay, hover highlights, and keyboard shortcuts

MultiPDF ChatBot AI: *Python, LangChain, Hugging Face, FAISS, Streamlit*

- AI-powered Q&A chatbot enabling conversational exploration across multiple PDFs, built with LangChain, FAISS vector retrieval, and the Instructor-XL embedding model, with a Streamlit interface supporting multi-PDF upload and real-time contextual responses

TULSEE (Team Collaboration Platform): *React, Node.js, MongoDB, Socket.io, Firebase, Zoom API*

- Full-stack team collaboration platform with real-time group chat (Socket.io, end-to-end encryption), CRUD task management, media uploads, project archiving, Google SSO, and Zoom API integration for in-app meeting scheduling
-

EDUCATION

Stevens Institute of Technology

M.S. Computer Science | GPA: 3.84 | Provost's Master's Scholarship

Aug 2021 – May 2023

University of Mumbai

B.S. Computer Science | GPA: 3.5

May 2015 – Jun 2018
