

Jaiganesh Rao

Full Stack Developer | Applied AI

+1 (551) 689-6918 | jaiganesh.rao31@gmail.com | Jersey City, NJ | [linkedin.com/in/jaiganeshrao](https://www.linkedin.com/in/jaiganeshrao) | jaiganesh-rao.vercel.app

SUMMARY

Full Stack AI Developer with 6+ years building and shipping production systems across insurtech, fintech, and enterprise SaaS. At Afficiency, architected a schema-driven React and Flask platform serving 30,000+ insurance agents across 6+ carrier integrations and processing around \$5M in annual premium volume. Co-built a team-wide agentic AI workflow using Claude Code that cut feature delivery time by roughly 70%. Takes full ownership of what gets built, cares about product outcomes as much as code quality, and is looking for IC roles where that combination matters.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML/CSS

Frontend: React.js, Next.js, Vue.js, React Native, Redux, Zustand, React Query

Backend: Node.js, Express, Flask, FastAPI, Django, GraphQL, REST APIs, Microservices, Socket.io

AI / LLMs: Claude Code, MCP, OpenAI Codex, LangChain, RAG, FAISS, Hugging Face, Prompt Engineering, Agentic Workflows

Databases: PostgreSQL, MySQL, MongoDB, Redis, Valkey, SQLAlchemy

Cloud & DevOps: AWS (EC2, S3, CloudFront, Cognito, Lambda), Azure, GCP, Kubernetes, Rancher, Docker, CI/CD, NGINX, Grafana

Tools & Practices: Git, GitLab, GitHub Actions, Playwright, Postman, Agile/Scrum, System Design, Figma

EXPERIENCE

Afficiency Inc.

Full Stack Developer

Sep 2023 - Present

New York, NY

- Co-built a team-wide agentic AI engineering SOP using Claude Code, where structured specs and BRDs served as AI input artifacts before any code was written, with defined constraints and acceptance criteria upfront. Drove full team adoption, achieving near-zero bug rates and full Playwright E2E coverage on every feature.
- Engineered the core platform serving 30,000+ agents across 6+ carriers: a schema-driven React UI framework with product rules in JSON configs enabling zero-code carrier onboarding, and Flask APIs with Redis caching that lowered policy quoting response times by 60%.
- Developed Monitorly, an in-house session-replay platform (LogRocket alternative) that trimmed tooling costs by 40%, and used it to diagnose elusive production UI bugs, driving an automated feedback loop that cut agent-reported issues by roughly 70% over 2 months.
- Created an AI-assisted PDF engine (HTML/Jinja2 + WeasyPrint) that uses Claude to reverse-engineer insurance form layouts into templates, now maintaining 120+ forms across 4 live products and shrinking new-form development time by ~90% (from ~4 weeks to 1-2 days).
- Architected Application 360, an AI-powered operations dashboard that aggregates every data source about an insurance application into one investigator screen with a human-readable diagnosis engine, cutting incident triage time by 80%.
- Delivered a fraud detection and underwriting-verification system integrating LexisNexis, GIACT, MVR, MIB, and FHIR-based EHR data, enabling fully digital underwriting decisions in under 10 minutes while keeping the platform at zero standing fraud cases.
- Onboarded new engineers onto the system's event-driven, multi-trigger backend architecture, distilling weeks of self-taught discovery into a guided walkthrough that got them shipping features from day one.
- Directed a rapid, AI-driven migration of the production codebase from AWS to Azure in 3 days, including MySQL/Redis to PostgreSQL/Valkey, and restructured a monolithic repo into per-product repositories.

Systems Engineering Research Center (SERC), Stevens Institute of Technology

Full Stack Developer

Jul 2022 - Jun 2023

Hoboken, NJ

- Designed and launched Helix, a multi-survey builder and publisher platform (React.js, Node.js/Express, MySQL, AWS EC2/S3/Cognito) that lets researchers create, publish, and export behavioral and logical questionnaires, serving 20,000+ active researchers with a 40% gain in assessment-creation efficiency and a 25% cut in time-to-market.
- Implemented a secure REST API backend (RBAC, JWT auth, input validation, SQL injection prevention) and containerized it for AWS EC2 with a GitHub Actions CI/CD pipeline, cutting deployment time to 15 minutes and achieving 99.9% uptime.
- Led the frontend migration of SERC's CMS from a legacy PHP Laravel monolith to a React.js SPA, and designed user-centric wireframes and a reusable component library that boosted research workflow productivity by 30%, increased user interaction by 25%, and reduced code volume by 50%.

LTI (Larsen & Toubro Infotech)

Software Engineer

Jan 2019 - Jul 2021

Navi Mumbai, India

- Shipped features for an enterprise production management application on the MERN stack, serving 50,000+ users across global teams with real-time data sync and analytics dashboards.
- Improved API performance 10x by adding Redis caching and optimizing MongoDB aggregation pipelines and indexing, reducing average response times from 3s to 300ms, while rolling out 200+ REST API endpoints to support enterprise-scale traffic.
- Contributed to refactoring a monolithic Node.js backend into domain-driven microservices, cutting release cycle time by roughly 30% through independent, team-owned deployments.

PROJECTS

AffiHub — React.js, Node.js, Flask, PostgreSQL, AWS

Internal support ticketing system with workflow automation, agent assignment, and status tracking, built to replace a HubSpot subscription.

JumpToCode — React Fiber, Node.js, Express, VS Code CLI

Chrome DevTools extension that maps live React UI components to source file and line for one-click navigation into VS Code.

MultiPDF ChatBot AI — Python, LangChain, Hugging Face, FAISS, Streamlit

AI chatbot for conversational search across multiple PDFs using RAG retrieval and the Instructor-XL embedding model.

TULSEE — React, Node.js, MongoDB, Socket.io, Firebase, Zoom API

Team collaboration platform with real-time encrypted group chat, task management, Google SSO, and Zoom API meeting scheduling.

EDUCATION

Stevens Institute of Technology

Master of Science in Computer Science

GPA: 3.84 | Provost's Master's Scholarship

Aug 2021 - May 2023

Hoboken, NJ

University of Mumbai

Bachelor of Science in Computer Science

GPA: 3.5

May 2015 - Jun 2018

Mumbai, India
