PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years building and shipping production systems across insurtech, fintech, and enterprise SaaS. At Afficiency, architected a schema-driven React and Flask platform serving 30,000+ insurance agents across 6+ carrier integrations and processing around \$5M in annual premium volume. Co-built a team-wide agentic AI workflow using Claude Code that cut feature delivery time by roughly 70%. Takes full ownership of what gets built, cares about product outcomes as much as code quality, and is looking for IC roles where that combination matters.

WORK EXPERIENCE

Afficiency Inc. - Full Stack Developer

Sep 2023 - Present

New York, NY

- Co-built a team-wide agentic AI engineering SOP using Claude Code, where structured specs and BRDs served as AI input artifacts before any code was written, cutting feature delivery from weeks to roughly one week for large features and to same-day for smaller ones, with near-zero bug rates and end-to-end Playwright test coverage.
- Used this spec-driven workflow to help the team scale Monitorly (an in-house session-replay and observability platform) into a full production tool, and to build "Application 360," an internal L2 diagnostic tool that aggregates application status, errors, and session data into a single investigator view.
- Built an AI-assisted PDF engine (HTML/Jinja2 + WeasyPrint) that uses Claude to reverse-engineer insurance-form layouts into templates, now maintaining 120+ unique forms across 4 live products and cutting new-form development time roughly 90% (from ~4 weeks to ~1-2 days).
- Architected the core platform serving 30,000+ agents across 6+ carriers: built a schema-driven React UI framework where product rules lived in JSON configs enabling zero-code carrier onboarding, and engineered Flask APIs with Redis caching that cut real-time policy quoting response times by 60%.
- Co-designed the Underwriting Portal and UW-Studio, giving underwriters and admins RBAC-governed case management and decisioning tools for 20,000+ agents, plus a no-code configuration layer that lets the team onboard new carrier integrations without engineering support.
- Delivered a fraud detection and underwriting-verification system integrating LexisNexis, GIACT banking validation, MVR driving records, MIB reports, and FHIR-based EHR integrations for applicant health record retrieval, enabling fully digital underwriting decisions in under 10 minutes and keeping the platform at zero standing fraud cases.
- Directed an agentic-AI-assisted migration of the production codebase from AWS to Azure in 3 days, including MySQL/Redis to PostgreSQL/Valkey, and restructured the agent-facing eApp codebase from a single repository into per-product repositories along the way.
- Built AffiHub, a full internal support ticketing system with workflow automation and agent assignment, after direct discovery sessions with the support team, replacing the team's HubSpot subscription entirely.

Systems Engineering Research Center (SERC) - Full Stack Developer

Jul 2022 - Jun 2023

Hoboken, NJ

- Designed and launched Helix, a behavioral research platform (React.js, Node.js, MySQL, AWS) used by 20,000+ active researchers, including a full frontend migration from PHP Laravel to a React SPA that improved performance by 40%.
- Built a secure REST API backend with RBAC and JWT authentication for sensitive research data, and a reusable React component library that cut code duplication by 50% and improved feature velocity by 25%.
- Deployed to AWS EC2 via Docker and GitHub Actions CI/CD, achieving sub-15-minute deployments and 99.9% uptime across the platform.

LTI (Larsen & Toubro Infotech) - Software Engineer

Jan 2019 - Jul 2021

Navi Mumbai, India

- Worked on a MERN stack enterprise application on AWS serving 50,000+ global users, contributing to real-time data sync, analytics dashboards, and 200+ REST API endpoints.
- Improved API response times by 10x using Redis caching and optimized MongoDB aggregation pipelines, bringing average latency from 3s to 300ms. Helped migrate a monolithic Node.js backend into microservices and pushed automated test coverage to 80%.

PROJECTS

JumpToCode - React Developer Chrome Extension

React Fiber | Node.js | Express | VS Code CLI

Chrome DevTools extension that traverses the React Fiber tree to map live UI components to their exact source file and line, enabling one-click navigation into VS Code via a local Express bridge.

MultiPDF ChatBot AI

Python | LangChain | FAISS | Streamlit

AI chatbot for conversational search across multiple PDFs using LangChain, FAISS vector retrieval, and the Instructor-XL embedding model, with a Streamlit interface for real-time multi-file responses.

TULSEE - Team Collaboration Platform

React | Node.js | MongoDB | Socket.io | Firebase | Zoom API

Full-stack team workspace with real-time encrypted group chat, task management, file uploads, Google SSO, and Zoom API integration for in-app meeting scheduling.

EDUCATION

Master of Science in Computer Science - Stevens Institute of Technology

Aug 2021 - May 2023

Hoboken, NJ | GPA: 3.84 | Provost's Master's Scholarship

Bachelor of Science in Computer Science - University of Mumbai

May 2015 - Jun 2018

Mumbai, India | GPA: 3.5

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML/CSS

Frontend: React.js, Next.js, Vue.js, React Native, Redux, Zustand, React Query, Expo, Chakra UI

Backend: Node.js, Express, Flask, FastAPI, GraphQL, REST APIs, FHIR, Microservices, Socket.io

AI / LLMs: Claude Code, Claude APIs (Anthropic), LangChain, Hugging Face, RAG Pipelines, FAISS, Prompt Engineering

Databases: PostgreSQL, MySQL, MongoDB, Redis, Valkey, SQLAlchemy, SQL Server

Cloud & DevOps: AWS (EC2, S3, CloudFront, Cognito, Lambda), Azure, GCP, Kubernetes, Docker, NGINX, Firebase, CI/CD

Tools & Practices: Git, GitLab, GitHub Actions, Playwright, Postman, New Relic, JIRA, Agile/Scrum, Figma
